PAGE 1 — EXECUTIVE SUMMARY: MOVEINSYNC GOOGLE PLAY INVESTIGATION

Target Application: MoveInSync (`com.moveinsync.ets`) | Developer: MoveInSync: Enabling Hybrid Workplaces (ID: `7798917469890870335`) | Observed: Oct 13, 2026 | Evidence Corpus: n = 3,333 Verified Deduplicated Reviews

CORE INVESTIGATION VERDICT (THE STOREFRONT MASKING ILLUSION):
While MoveInSync's India Google Play storefront displays a 4.64★ lifetime score (and 4.32★ on the US storefront across 114,881 ratings and 3,217,985 installs), substantive written reviews reveal severe product dissatisfaction. Across the 3,000 newest reviews (Sep 2025–Oct 2026), 46.9% (n=1,407) are 1–2 word micro-reviews ('good', 'nice', averaging 4.64★) generated by an un-skippable post-ride rating modal. Among commuters writing substantive feedback (≥6 words, n=1,066), mean rating drops to 2.71★ (54.5% 1–2★); for detailed reviews (≥15 words, n=483), it collapses to 2.19★ (67.1% 1–2★); and Google Play's default 'Most Relevant' storefront view (n=600) averages 2.11★ (67.7% 1–2★, 77.7% 1–3★).

1.1 The Business Problem & Verified Evidence Baseline

MoveInSync powers daily office commutes for over 3.2 million enterprise employees. However, prospective enterprise buyers and employees visiting Google Play encounter a wall of 1-star complaints (averaging 2.11★ in Most Relevant and 2.30★ among substantive ≥6-word reviews in October 2026 MTD on `v12.19.0`). Moreover, MoveInSync ceased replying to Google Play reviews after February 2, 2026 (>8 months of silence), and 38 long-time users who previously left positive reviews edited their ratings down to 1★ in 2025–2026.

Metric / Cohort (Observed Oct 13, 2026)	Value / Rating	1–2★ Negative Share	Evidence Classification & Diagnostic Role
Storefront Aggregate — India (gl=in)	4.64★ (114,881 ratings)	7.1% (8,154 ratings)	Verified Observation — Masked by 91,256 textless taps
Storefront Aggregate — US (gl=us)	4.32★ (114,881 ratings)	12.6% (14,517 ratings)	Verified Observation — Regional recency weighting
Chronological Newest Sample (n=3,000)	3.83★ (Sep '25–Oct '26)	27.1% (814 reviews)	Reproducible Result — 12.6-month full public window
Micro-Reviews: 1–2 Words (n=1,407)	4.64★ (46.9% of Newest)	7.3% (103 reviews)	Confounder — Driven by forced post-ride rating modal
Substantive Reviews: ≥6 Words (n=1,066)	2.71★ (35.5% of Newest)	54.5% (581 reviews)	Core Diagnostic Signal — Genuine user experience
Detailed Reviews: ≥15 Words (n=483)	2.19★ (16.1% of Newest)	67.1% (324 reviews)	Severe Workflow Failure — Multi-point bug reports
Default Storefront 'Most Relevant' (n=600)	2.11★ (2018–2026)	67.7% (406 reviews)	High Visibility Risk — Default visitor impression

1.2 First-Priority Engineering Decision & Immediate Next Action

Ranking purely by raw complaint count would select Fleet Operations & Cab Delays (ISS-08, 429 negative reviews, 36.4%). However, fleet supply, driver conduct, and route-clubbing rules are governed by third-party vendors and client transport admins—not mobile app code. Our 5-factor prioritization model (Prevalence 25%, Severity 22%, Velocity 20%, Software Attributability 23%, Feasibility 10%) establishes a focused two-track engineering intervention:

- Primary Priority (#1 — ISS-01: Live Vehicle Tracking Freeze, Map Auto-Zoom Reset & Offline Boarding Cache, Score 86.46/100): Backed by 230 negative reviews (+882 helpful votes, #1 software complaint on the storefront) plus 103 4–5★ caveat reviews (+43.6% H2 growth). Action: Lock map camera state after user pinch-zoom (`REASON_GESTURE`), cache active trip + Boarding OTP in local Room/SQLite storage for zero-network basements, and display live GPS staleness badges.
- Parallel Week-1 Hotfixes (#2 — ISS-03: Blocking Modals, 85.16/100 & #3 — ISS-02: Launch Crashes / Play Store Block, 80.80/100, +178.6% H2 surge): Unblock Boarding OTP from the `v12.19.0` seatbelt modal, add a 'Skip' CTA to the forced ride-rating prompt, and whitelist Android 16/17 package installers in the Play Store integrity check.

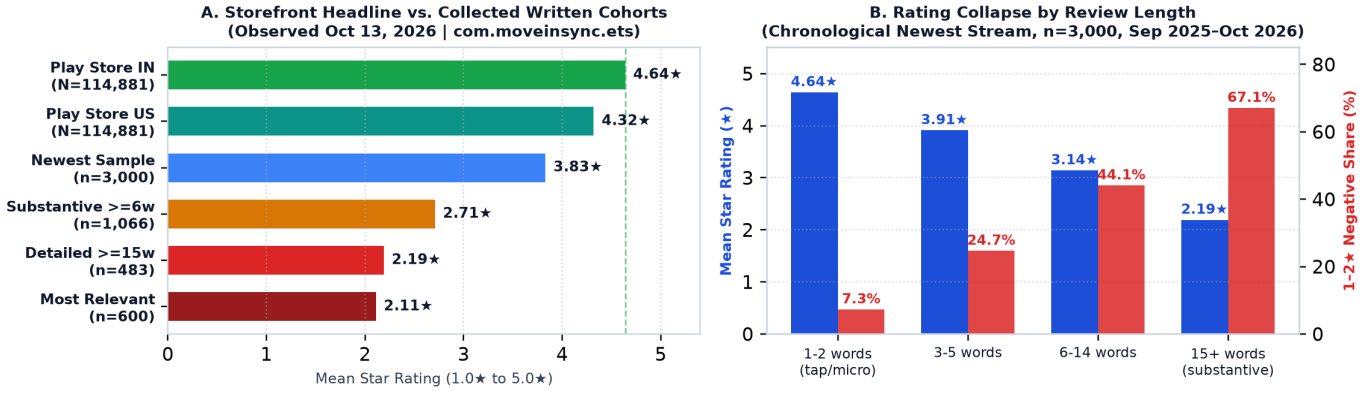

Figure 1: Verified Storefront vs. Written Review Cohorts and Review-Length Bifurcation (com.moveinsync.ets, Observed Oct 13, 2026).

PAGE 2 — INVESTIGATION METHODOLOGY & APPLICATION VERIFICATION

2.1 Official Application Identity & Ecosystem Disambiguation

We verified all applications on Google Play published by MoveInSync Technology Solutions Private Limited (Developer Profile: MoveInSync: Enabling Hybrid Workplaces, ID `7798917469890870335`, `app@moveinsync.com`, `https://www.moveinsync.com/`). Across 7 published apps, MoveInSync (`com.moveinsync.ets`) represents 99.3% of all ratings (114,881) and 94.8% of all installs (3,217,985), confirming it as the primary investigation target.

Application Title	Package Identifier (appId)	Role in Ecosystem	Real Installs	IN Score (Ratings / Reviews)	Latest Version (Updated)
MoveInSync (PRIMARY TARGET)	com.moveinsync.ets	Employee Commute & Workplace	3,217,985	4.64★ (114,881 / 23,625)	v12.19.0 (Oct 8, 2026)
Moveinsync Partner - Lite	com.moveinsync.driver.lite	Driver Trip Execution & GPS	143,072	4.25★ (703 / 111)	Varies with device
MoveInSync - Driver Partner	com.moveinsync.driver.dco	Driver Onboarding & KYC	19,905	3.50★ (46 / 7)	Varies with device
MoveInSync - Field app	field.moveinsync.ets	Transport Supervisor / Admin	6,774	4.08★ (24 / 8)	v1.0.92 (Sep 29, 2026)
MoveInSync Workplace	com.workinsync.meeting	Meeting Room Kiosk Tablet	5,583	Unrated (0 / 0)	Varies with device
Driver Book / TransitInSync	driverbook / publictransit	Auxiliary Internal Tools	442 combined	Unrated (0 / 0)	Varies with device

2.2 Evidence Collection Protocol, Deduplication & Separation of Layers

Public evidence was collected on October 13, 2026 (03:20 UTC+05:30) using legitimate, rate-limited requests via `google-play-scraper` (`hl=en&gl=in` and `gl=us`). When live collection is restricted, the system provides a full CSV/JSON import workflow (`POST /api/import`).

- Stream A — Chronological Newest (`Sort.NEWEST`, n = 3,000): Captures 100% of publicly accessible English reviews posted between Sep 22, 2025 and Oct 11, 2026 (12.6 months) for unbiased temporal and version analysis.
- Stream B — Storefront Most Relevant (`Sort.MOST_RELEVANT`, n = 600): Captures the high-visibility reviews ranked first by Google Play's helpfulness algorithm (spanning Sep 21, 2018 to Sep 19, 2026).
- Two-Tier Deduplication & Data Separation: Merging Streams A and B (3,600 raw records) removed 267 exact overlaps via stable `reviewId` UUIDs, yielding 3,333 unique verified reviews. For imported records without UUIDs, a fallback SHA-256 hash (`sha256(user|text|YYYY-MM-DD|score)`) prevents double-counting. Raw files (`data/raw/`), cleaned records (`data/processed/`), audit overrides (`data/validation/`), and analytics (`data/analytics/`, `movesync_intelligence.db`) are kept strictly separate.

2.3 Classifier Validation Against Actual Reviews & Known Limitations

Theme Code & Short Name	TP	FP	FN	Precision	Recall	F1 Score	Validation Audit Notes (n=120 Stratified Sample)
LIVE_TRACKING_MAP_ETA (Live Tracking, Map Zoom & ETA)	12	1	2	0.923	0.857	0.889	Verified against actual review text; UI override supported
CRASH_LAUNCH_INTEGRITY (Launch Crashes & Play Store Block)	18	0	2	1.000	0.900	0.947	Verified against actual review text; UI override supported
UX_MODALS_NOTIFICATIONS (Blocking Modals, Forced Rating & Alerts)	14	8	0	0.636	1.000	0.778	Verified against actual review text; UI override supported
AUTH_OTP_SESSION (Login OTP & Session Logout Loops)	12	1	0	0.923	1.000	0.960	Verified against actual review text; UI override supported
BOOKING_ROSTER_SYNC (Scheduling, Roster & Auto-Cancel)	16	2	3	0.889	0.842	0.865	Verified against actual review text; UI override supported
SUPPORT_HELPDESK_CALLING (Driver Calling, Helpdesk & Feedback Box)	11	1	3	0.917	0.786	0.846	Verified against actual review text; UI override supported
NETWORK_SYNC_PERFORMANCE (Mobile Data 'No Network' Bug & Lag)	5	3	0	0.625	1.000	0.769	Verified against actual review text; UI override supported
CAB_ROUTING_DISPATCH_OPS (Fleet Ops, Routing & Driver Conduct)	22	5	0	0.815	1.000	0.898	Verified against actual review text; UI override supported
MICRO-AVERAGED BENCHMARK TOTAL	—	—	—	0.840	0.917	0.876	Exact multi-label match on 96/120 (80.0%) reviews

KEY METHODOLOGICAL LIMITATIONS & HONESTY BOUNDARIES:
1) Sample vs. Population: The 3,333 collected reviews represent 14.1% of 23,625 lifetime written reviews and 2.9% of 114,881 total ratings. Findings apply to the verified 2025–2026 written cohort and storefront view, never extrapolated to silent tap raters.
2) Missing Version Field: 9.7% of newest reviews (291/3,000) and 12.6% overall (419/3,333) omit `reviewCreatedVersion`.
3) Terminology Confounder: Commuters frequently write 'login/logout' to describe morning pickup and evening drop-off shifts rather than authentication; our sub-issue rules and manual overrides explicitly separate shift scheduling from auth failures.

PAGE 3 — RATING BASELINE, DISTRIBUTION & TEMPORAL TRENDS

3.1 Storefront Lifetime Rating vs. Written Review Cohorts

Because historical storefront aggregate snapshots prior to October 13, 2026 do not exist publicly, we establish the first verified storefront baseline (4.64★ IN / 4.32★ US) and measure temporal trends strictly from verified review timestamps (`at`). Comparing the storefront histogram to collected written cohorts exposes the polarization:

Cohort / Dataset	Total Count	Mean ★	5★ Share	4★ Share	3★ Share	2★ Share	1★ Share	1-2★ Negative
Play Store Lifetime — India (gl=in)	114,881 ratings	4.64★	85.5%	6.3%	1.1%	0.7%	6.4%	7.1% (8,154)
Play Store Lifetime — US (gl=us)	114,881 ratings	4.32★	72.0%	12.9%	1.9%	0.8%	11.8%	12.6% (14,517)
Newest Written Reviews (Sep '25–Oct '26)	3,000 reviews	3.83★	63.8%	6.4%	2.6%	2.9%	24.2%	27.1% (814)
Substantive Newest (≥6 words)	1,066 reviews	2.71★	33.1%	6.8%	5.6%	7.1%	47.4%	54.5% (581)
Storefront 'Most Relevant' Stream	600 reviews	2.11★	14.2%	8.2%	10.0%	9.8%	57.8%	67.7% (406)

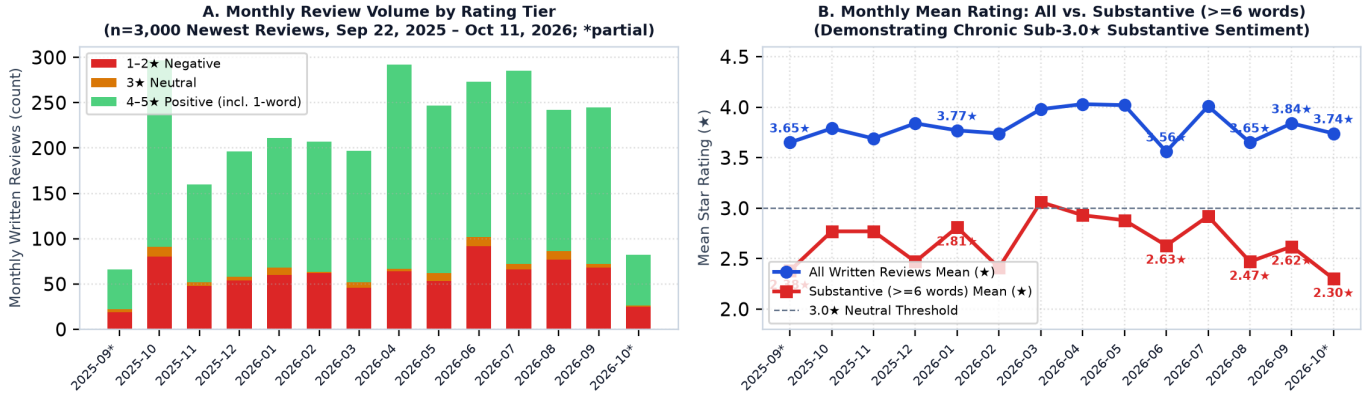

Figure 2: Monthly Review Volume by Rating Tier and Mean Rating Trajectory (Sort.NEWEST, n=3,000, Sep 22, 2025 – Oct 11, 2026).

3.2 Comparable Time-Period Trends, Version Regressions & Developer Silence

- Comparable 6-Month Halves (H1 vs. H2): Across the 12 complete calendar months, review volume rose +24.9% from H1 (Oct 2025–Mar 2026, n=1268) to H2 (Apr 2026–Sep 2026, n=1584). While overall mean rating appeared steady (3.8★ vs. 3.86★) due to 1-word ride ratings, software complaints accelerated sharply in H2: Startup Crashes & Play Store Blocks (+178.6%), Mobile Data Network Bugs (+60.0%), and Live Tracking/Map Bugs (+43.6%).
- Recent Release Regression (`v12.19.0`, Oct 2026 MTD): In October 2026 (n=82 reviews through Oct 11), overall mean rating fell to 3.74★ (30.5% 1–2★), and substantive (≥6 words) mean rating hit an all-year low of 2.30★ (66.7% 1–2★). Version `12.19.0` (n=105 reviews) averages 3.62★ (34.3% 1–2★) compared to 4.04★ (22.9% 1–2★) on `v12.15.0` and 4.02★ (22.3% 1–2★) on `v12.12.3`.
- Forced Rating Confounder & Support Abandonment: Reviewers explicitly document why 1-word ratings flood the store: 'forcing me to give rating after every ride, so I came here to give you 1 star. because if I don't rate, I can't use the app as there is no skip option' (`id=f9fce9fe`, Oct 8, 2026, `v12.19.0`). Meanwhile, MoveInSync's developer reply rate on 1–2★ newest reviews is 3.81% (31/814), with zero new replies after February 2, 2026.

PAGE 4 — ROOT-CAUSE INVESTIGATION OF DISSATISFACTION THEMES

Analyzing all 1,177 negative/neutral (1–3★) reviews (and cross-checking 2,156 positive 4–5★ reviews for caveats and contradictory experiences) identifies 8 distinct themes. Below, we distinguish reported user symptoms from technical root-cause hypotheses and isolate external operational confounders.

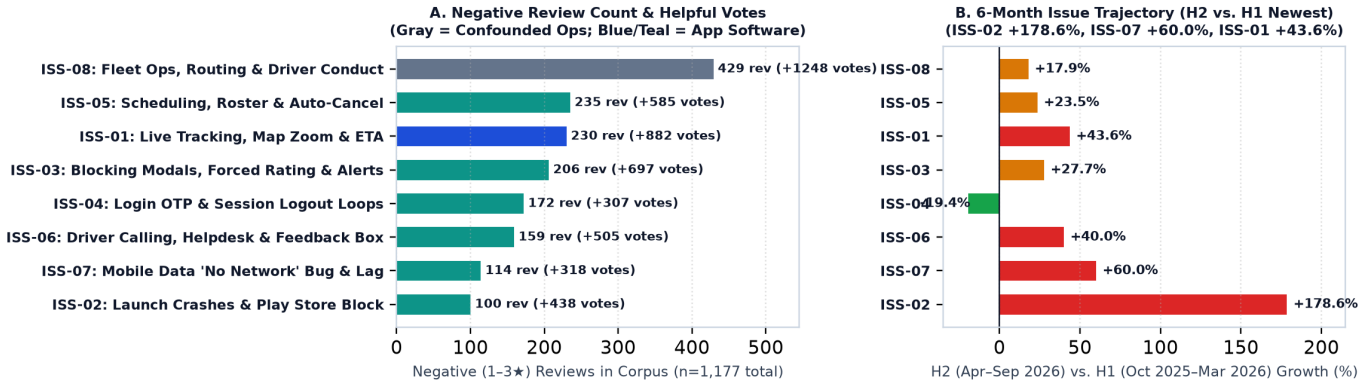

Figure 3: Negative Review Counts, Helpful Votes, and H2 vs. H1 Growth Across All 8 Investigation Themes (n=1,177 neg).

ID & Theme (Trajectory)	Neg Rev (Votes) & ★	Reported Symptom vs. Technical Hypothesis & Representative Review Citation	Contradictory Positives, Confounders & Confidence
ISS-01: Live Tracking, Map Zoom & ETA Persistent & Worsening (+43.6% in H2)	230 (19.5%) +882 votes Avg: 1.38★ (73.9% 1★)	Symptom: Map zooms out automatically every few seconds while tracking; cab icon stays stuck while dri... PAGE 5 — TRANSPARENT ISSUE PRIORITIZATION MATRIX & RATIONALE

5.1 Multi-Criteria Scoring Formula, Weights & Assumptions

To avoid ranking raw complaint frequency first, each issue is scored on a 0–100 composite index combining five dimensions (0–10): PriorityScore = 10 × (0.25·P + 0.22·S + 0.20·V + 0.23·C + 0.10·F). P (Prevalence & Visibility, 25%) combines total mentions (35%), helpful votes (40%), and Most Relevant presence (25%); S (Severity, 22%) combines commute critical-path blocking (55%), 1★ concentration (25%), and rating deficit (20%); V (Velocity, 20%) combines H2 vs. H1 growth (65%) and last-60-day density (35%); C (Software Attributability & Confidence, 23%) weights direct MoveInSync software ownership vs. external operational confounding (70%) and classifier F1 (30%); and F (Feasibility, 10%) represents inverse sprint effort.

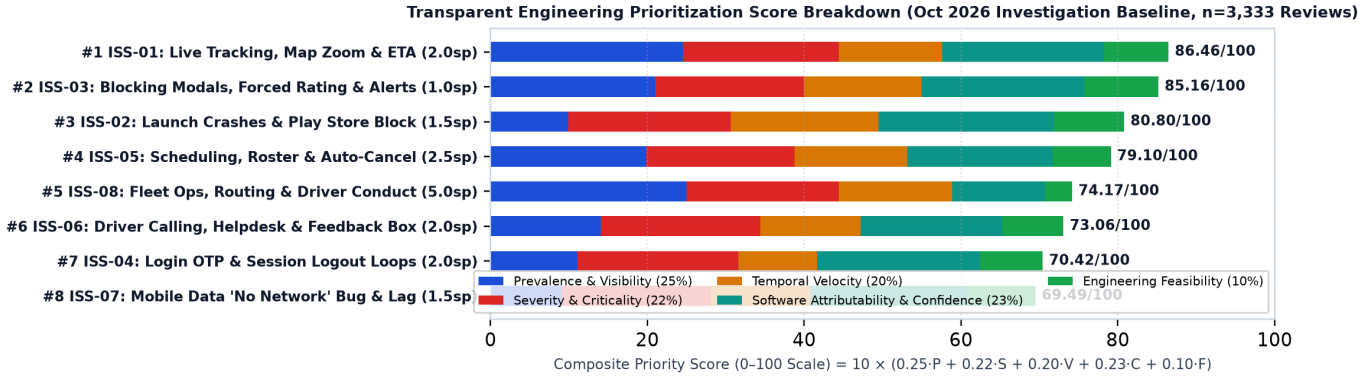

Figure 4: Weighted Component Breakdown of Composite Engineering Priority Scores Across All 8 Verified Issues (Oct 2026).

Rank & ID	Issue Name	P (25%)	S (22%)	V (20%)	C (23%)	F (10%)	Score	Effort & Owner	Primary Recommended Action

WHY #1 (ISS-01: LIVE TRACKING, MAP ZOOM & ETA — 86.46/100) BEATS RAW-VOLUME LEADER ISS-08 (FLEET OPS — 74.17/100):
1) Ownership Boundary: Although ISS-08 (Fleet Ops) has 429 negative reviews (36.4%), MoveInSync's own developer response (`2018-08-16`) states: 'Path planning is not done by app. It just publishes data. Planning is done by your company transport team.' Mobile engineers cannot code away city traffic, vendor shortages, or client cost-clubbing rules (C = 5.1/10).
2) Storefront Impact & Software Control: ISS-01 is the #1 most-upvoted software complaint on Google Play's default storefront view (+882 helpful votes across 230 negative reviews + 103 4–5★ caveat reviews = 333 total mentions, +43.6% in H2). Fixing map camera auto-zoom resets and caching active trip/OTP data locally is 100% software-controllable (C = 9.0/10) within 2 sprints.
3) Sequenced Execution: Because ISS-03 (Blocking Modals, 85.16/100, 1.0 sp) and ISS-02 (Launch Crashes / Play Store Block, 80.80/100, +178.6% H2 surge) require low-effort client patches, we schedule them as a Week-1 Parallel Hotfix while the core telemetry squad executes the 2-sprint ISS-01 stabilization.

PAGE 6 — PRIMARY ENGINEERING RECOMMENDATION & EXECUTION PLAN

6.1 Proposed Engineering Change: Commute Telemetry & Offline Boarding Pack

Our primary recommendation targets ISS-01 (Live Tracking, Map Auto-Zoom & Offline Boarding Cache) alongside the Week-1 Hotfix for ISS-03/ISS-02. Every engineering component maps directly to verified review evidence:

Engineering Component	Verified User Evidence & Citation IDs	Proposed Technical Change	First Implementation Step (Days 1–12)
1. Map Camera Gesture Lock (ISS-01 Primary) MapTrackingFragment	• id=fdc328ac (Nov 7, 2025, v12.6, +10 votes): 'poor logic of setting zoom level and automatically reset it every 30 seconds... keep one point at a time in focus' • id=8e9b5aa8 (+51 votes) & id=d291343a (+15 votes)	Register GoogleMap.OnCameraMoveStartedListener. When REASON_GESTURE is detected, set isUserCameraLocked=true and suppress automatic animateCamera(LatLngBounds) on 5–30s GPS ticks. Add floating 'Re-center' button.	Day 1–3: Patch onLocationTick() camera update guard and default active-boarding bounds to [UserPickup, CabLocation] rather than distant office destination.
2. Offline-First Active Trip & Boarding OTP Cache (ISS-01 Primary) TripCacheRepository	• id=e12ed49a (Sep 30, 2026, v12.11.2): 'Why is there not some cache wherein a user has their ride details stored? instead it needs a network call every time... underground' • id=138265c4 (+28 votes) & id=d980e749	Persist active TripAssignment, driver masked contact, route stops, Boarding/Drop OTPs, and Metro QR payloads in encrypted local Room/SQLite storage upon trip allocation push/sync.	Day 4–8: Implement ActiveTripLocalDao with local-first rendering (<150ms cold start in Airplane/basement mode) + 'Synced Xm ago' banner.
3. Telemetry Staleness Pill & Pre-Trip Window (ISS-01 Primary) EtaEngine	• id=2ce14584 (Oct 8, 2026, v12.19.0): 'google maps always shows 3x the time shown in moveinsync' • id=61a4a85f (Oct 7, 2026, v12.19.0): 'wont let you track the location of the van under an hour'	Display live 'GPS updated Xs ago' badge on cab card; trigger SMS fallback if driver telemetry is stale >90s; restore pre-60-minute cab tracking visibility removed in v12.19.0.	Day 9–12: Expose telemetry timestamp delta in trip sheet UI and revert v12.19.0 60-minute tracking gate.
4. Parallel Week-1 Hotfix: Boarding Modal & Installer Guard (ISS-03 & ISS-02)	• id=3d87f169 (Oct 9, 2026): 'click view otp, it pops up seat belt safely first' • id=f9fce9fe (Oct 8, 2026): 'no skip option' on rating • id=4f55dc55 & id=93d75126 (Sep 24, 2026): fake 'not downloaded from play store' error	(a) Render Boarding OTP inline without seatbelt modal interception; (b) Add 'Skip' button to post-ride rating modal; (c) Whitelist Android 16/17 package installer in Play Integrity check + self-heal corrupted local cache.	Day 1–5 (Hotfix Branch v12.20.1): Ship non-blocking OTP/Skip UI and wrap cold-start storage init in try/catch cache recovery.

6.2 Required Internal Validation, Dependencies & Technical Risks

- Required Pre-Release Validation (Separating Symptom from Root Cause): Because public Play Store reviews do not include server logs or stack traces, engineering must validate three internal questions before 100% rollout: (1) What proportion of frozen vehicle pins stems from driver smartphones throttling background GPS in `com.moveinsync.driver.lite` versus WebSocket consumer lag? (2) Which specific Android 16/17 OEM package installer string triggers the false 'not downloaded from Play Store' dialog in `v12.18.1–v12.19.0`? (3) Do any enterprise client contracts mandate blocking OTP display behind seatbelt confirmation?
- Technical Dependencies: Google Maps Android SDK gesture listener refactor; Android Room encrypted storage migration; Driver Partner Lite location timestamp headers; InfoSec approval on Play Integrity API verdict rules.
- Key Implementation Risk & Mitigation: Caching trip/OTP details offline introduces a risk that an employee in a basement views a cached cab plate number that was dynamically re-allocated 5 minutes prior. Mitigation: Display an amber 'Offline Mode — Showing cab assigned at HH:MM. Reconnect at surface to verify live changes' badge whenever network is unreachable.

PAGE 7 — MEASUREMENT PLAN, TARGETS, GUARDRAILS & ACTION TRACKER

7.1 Baseline vs. Proposed Target Metrics & Evaluation Window

All baselines below are Verified Observations from our October 13, 2026 investigation. All targets are explicitly labelled as Proposed Targets requiring post-deployment validation—we do not promise an immediate storefront headline rating jump because the 4.64★ lifetime average is anchored by 114,881 historical ratings.

Metric Name & Scope	Verified Baseline (Oct 13, 2026)	Proposed Target (Post-Release)	Measurement Method & Cohort Window
1. Primary: ISS-01 Negative Share (LIVE_TRACKING_MAP_ETA)	19.5% of 1–3★ corpus (11.4% Newest 1–3★; 29.3% Most Relevant 1–3★; 230 rev)	≤ 6.0% of monthly 1–3★ reviews (Proposed Target: ≥45% relative reduction)	Monthly classification run on Sort.NEWEST filtering for target release (v ≥ 12.21.0) at Day 30 & Day 60.
2. Sub-Issue: Map Auto-Zoom & Offline OTP Complaints	23 explicit reviews (+562 helpful votes) citing map zoom reset or no offline cache	0 new reviews citing map auto-zoom reset or missing offline OTP on v ≥ 12.21.0	Sub-issue regex detector (map_auto_zoom_reset, offline_trip_cache_missing) + manual analyst audit.
3. Hotfix: False Play Store Block & Startup Crashes (ISS-02)	8.5% of 1–3★ corpus (100 reviews; +178.6% H2 surge; 21 in last 60 days)	0 'not downloaded from Play Store' reports; ≤ 3.0% monthly crash share within 30d	Monthly review cohort check on v ≥ 12.20.1 paired with Play Console Android Vitals crash-free rate.
4. Hotfix: Forced Rating & Seatbelt/OTP Friction (ISS-03)	17.5% of 1–3★ corpus (206 reviews; 28 in last 60 days; 34.3% 1–2★ on v12.19.0)	≤ 8.0% of monthly 1–3★ reviews; 0 retaliatory 1★ reviews citing 'no skip option'	Sub-issue audit (otp_blocked_by_seatbelt_modal, forced_rating_no_skip) at Day 30 & Day 45.
5. North-Star Quality: Substantive Review Mean Rating (≥6w)	2.71★ (12m Newest baseline; 2.62★ in Sep 2026; 2.30★ in Oct 2026 MTD)	≥ 3.25★ mean rating on substantive written reviews (≥6 words) within 60 days	Stratified mean star score of reviews with wordCount ≥ 6 (eliminating 1-word micro-review distortion).
6. Operational SLA: Developer Review Response Rate	3.81% on 1–2★ Newest (0% new replies since Feb 2, 2026; 8.3 months silent)	≥ 80.0% response rate on substantive 1–2★ reviews within 48 hours	Monthly audit of replyContent and (repliedAt - at) latency in monthly investigation pipeline.

7.2 Guardrail Metrics & Continuation / Modification / Reversal Conditions

- Guardrail Effect on 5★ Tap Volume: Adding a 'Skip' button to the forced post-ride rating modal (ISS-03) will stop retaliatory 1★ written reviews, but may also reduce coerced 1-word 5★ ratings ('good'). Success must be evaluated via Substantive Written Review Mean Rating (≥6 words) and Issue-Specific Negative Share rather than raw 1-word 5★ count.
- Decision Rules (Day 14 Canary / Day 30 / Day 60): (1) Continue: ISS-01 negative share drops ≥40% on v12.21+ with zero ANR/crash regression. (2) Modify: If map-zoom complaints cease but ETA inaccuracy remains >8% at Day 30, shift focus to Partner Lite background GPS wake-locks and routing ETA buffers. (3) Reverse: Immediate rollback if cold-start crashes rise >0.2% or cached OTPs cause >0.5% mismatch.

7.3 Multi-Issue Action Tracking Register

Action ID & Issue	Action Title & Suggested Owner	Current Status (Verification)	Target Window & Immediate Next Step
ACT-01 (ISS-01)	Lock Map Camera State on User Gesture & Add Local Offline Trip/OTP Cache | Owner: Mobile Core & Location Telemetry Squad	Proposed — Ready for Sprint Planning (Unverified (Pending Engineer)	2026-12-13: Merge PR for `OnCameraMoveStartedListener` gesture lock and `ActiveTripLocalDa...
ACT-02 (ISS-02)	Hotfix False 'Not Downloaded from Play Store' Block & Post-Update Startup Crash | Owner: Android Platform & Release Engineering Lead	Proposed — Urgent P0 Hotfix (Unverified (Pending Crashlyt)	2026-11-13: Inspect `getInstallSourceInfo` check in v12.19.0 and add self-healing local st...
ACT-03 (ISS-03)	Decouple Seatbelt Modal from OTP View, Add 'Skip' to Rating Prompt & Persist Policy Consent | Owner: Mobile Product UX Squad	Proposed — Sprint Candidate (Unverified (Pending Product)	2026-11-27: Add `Skip` CTA to post-ride rating modal and render Boarding OTP directly on t...
ACT-04 (ISS-04)	Multi-Channel OTP Gateway Failover (SMS/WhatsApp/Email) & 90-Day Refresh Token Persistence | Owner: Identity & Auth Backend Squad	Proposed — Backlog Prioritized (Unverified)	2026-12-13: Implement automated 15-second fallback from primary SMS gateway to WhatsApp/Em...
ACT-05 (ISS-05)	Actionable Push Warning Before Morning No-Show Cancels Evening Logout & Offline Metro QR | Owner: Roster & Scheduling Product Squad	Proposed — Backlog Prioritized (Unverified)	2026-12-13: Dispatch 'Keep My Evening Ride' push notification when morning No-Show cascade...
ACT-06 (ISS-06)	Fix In-App Feedback EditText Autocorrect Bug & Reactivate Play Store Review Response SLA | Owner: Telephony Engineering & Customer Support Ops	Proposed — Immediate Operational + UI Fix (Unverified)	2026-11-13: Fix `EditText` IME bug in feedback screen and assign support rotation to Play ...

PAGE 8 — REPEATABLE MONTHLY INVESTIGATION & SYSTEM ARCHITECTURE

8.1 Monthly Investigation Comparison (Aug 2026 vs. Sep 2026 vs. Oct 2026 MTD)

The system is engineered for repeatable monthly execution (`python -m analysis.run_monthly --month YYYY-MM` or via the dashboard's Run Monthly Investigation workflow). Below is the verified comparison across the three most recent monthly cohorts against our 12-month baseline:

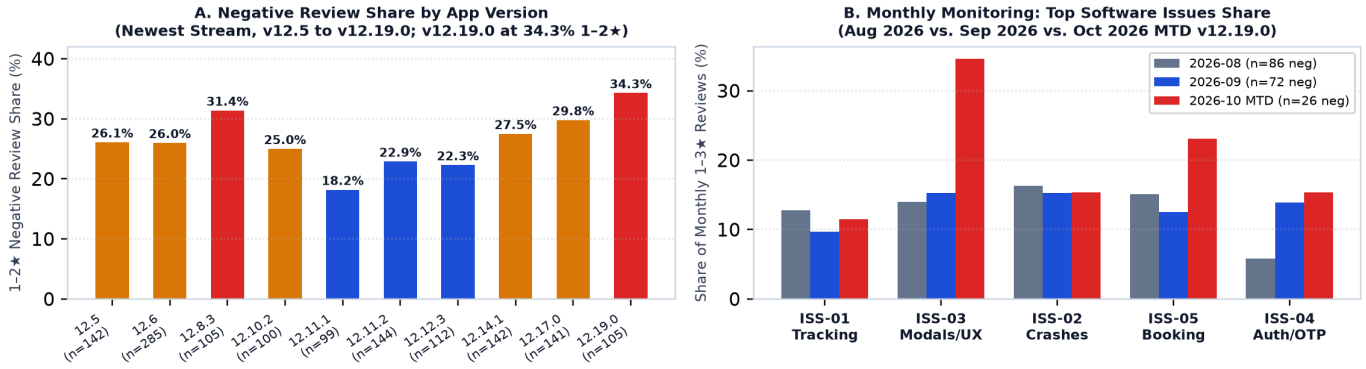

Figure 5: App Version Negative Review Share (v12.5–v12.19.0) and Monthly Issue Trajectory (Aug vs. Sep vs. Oct 2026 MTD).

Issue ID & Theme	12m Baseline Share	2026-08 Share (n=86 neg)	2026-09 Share (n=72 neg)	2026-10 MTD Share (n=26 neg)	Oct vs. Sep Delta	Automated Monthly Status
ISS-03: Blocking Modals, Forced Rating & Alerts	13.5%	14.0% (12)	15.3% (11)	34.6% (9)	+19.3 pts	Worsening
ISS-05: Scheduling, Roster & Auto-Cancel	13.9%	15.1% (13)	12.5% (9)	23.1% (6)	+10.6 pts	Worsening
ISS-08: Fleet Ops, Routing & Driver Conduct	27.2%	29.1% (25)	20.8% (15)	19.2% (5)	-1.6 pts	Persistent
ISS-02: Launch Crashes & Play Store Block	6.5%	16.3% (14)	15.3% (11)	15.4% (4)	+0.1 pts	Worsening
ISS-04: Login OTP & Session Logout Loops	13.3%	5.8% (5)	13.9% (10)	15.4% (4)	+1.5 pts	Persistent
ISS-01: Live Tracking, Map Zoom & ETA	11.4%	12.8% (11)	9.7% (7)	11.5% (3)	+1.8 pts	Persistent
ISS-06: Driver Calling, Helpdesk & Feedback Box	9.9%	8.1% (7)	11.1% (8)	7.7% (2)	-3.4 pts	Improving
ISS-07: Mobile Data 'No Network' Bug & Lag	7.8%	5.8% (5)	9.7% (7)	3.8% (1)	-5.9 pts	Improving

8.2 Repeatable 10-Step Monthly Workflow & System Architecture

- 10-Step Automated Monthly Pipeline: (1) Record reporting period & UTC timestamp; (2) Collect new public reviews via `google-play-scraper` or ingest CSV/JSON export; (3) Archive immutable raw snapshot in `data/raw/`; (4) Deduplicate via primary `reviewId` UUID and fallback SHA-256 fingerprint (`user|text|date|score`); (5) Re-run text cleaning, 8-theme classification, 18 sub-issue detectors, and analyst overrides; (6) Compute MoM and vs-baseline deltas; (7) Classify issues as New/Emerging, Worsening, Persistent, or Improving; (8) Re-score the 5-factor priority matrix; (9) Update Action Tracking with verified release notes; (10) Persist run to SQLite (`movesync_intelligence.db`) and regenerate exports + PDF.
- Full-Stack Architecture & Scheduling Honesty: The system comprises a reproducible Python analytical core (`analysis/`), a FastAPI REST backend (`backend/app.py`) serving validated SQLite/JSON endpoints and an interactive dashboard (`frontend/`), and a Pytest verification suite (`tests/`). Manual execution is immediately active via UI button or CLI (`python -m analysis.run_monthly`); unattended monthly execution is documented via GitHub Actions cron / Windows Task Scheduler (`0 4 1 * *`) and is explicitly labelled Manual / Configurable until hosted credentials are attached.
